Water Management Strategies against Water Scarcity in the Alps
Stratégies de gestion des ressources en eau contre la pénurie d'eau dans les Alpes
Wassermanagementstrategien gegen Wasserknappheit in den Alpen
Strategija upravljanja z vodami kot ukrep proti pomanjkanju vode v Alpah
Strategie di gestione delle risorse idriche per prevenire la carenza d'acqua nelle Alpi

The final conference of the ETC Alpine Space project Alp-Water-Scarce will be held in the magnificent surroundings of the Old University of Graz [on 20 - 22 September 2011]. Through a series of keynote lectures and project-related presentations, the challenges of water scarcity in different regions of the Alps likely to be or already affected by climate change will be analysed.

The two-day conference, which will be followed by an excursion [on 22 September 2011] to some of the project's Austrian Pilot Sites, will underline the importance of developing Early Warning Systems against local water scarcity in the short term as well as provide an overview of possible new forms of water management to avoid water shortages over the long-term.
