SETTLEMENT INVENTORY TSCHLIN

Main characters:

Main settlement of the community of Tschlin

Local authorities involved:

Community of Tschlin

Starting from... (initiatives in progress/data-set already available/...)

Recording of the settlement (text, plan and photos), for the first time all in digital form. The description, the plan and the photos of the settlements were all worked out respectively taken by architects (Hanspeter Schreiber and Roger Wülfling).

Operational tools to be applied:

The aim of this settlement inventory is to create planning instruments to protect and preserve the overall appearance of the settlements. At the beginning, there is made an analysis of the existing settlement was carried out – for the first time all the data is directly available in a digital form. The information is the basis for publications that help to start within the community a dialogue about preservation and (spatial) development of the historical settlement. Following this step, a study works out how the the local people's appreciation of sites of historic interest can be improved. The final intention is to increase the participation of the local people.
