

## WP 5 – BEST PRACTICE STARTING UP

### Pilot areas of Regione Piemonte

#### - *Town of Chiomonte (TO)*

**Main characters:** Chiomonte lies in Alta Valle Susa at 750 m a.s.l., on the right side of the Dora Riparia river. It has an interesting historical centre and in its territory 4 villages (Frais, Sant'Antonio, Ramat e Cels) are also located.

**Local authorities involved:** Municipality of Chiomonte

**Starting from...** Handbook for the restoration of typical architecture of private spaces; Interreg IIIA – Alcotra; GAL Escartons e Valli Valdesi (Leader+ 2000-2006); Project financed by the Regional administration to maintain and improve scholastic services in mountain

**Operational tools to be applied:** Actions in the pilot area will include the application of the SWOT analysis methodology (WP3), by involving local communities, and the elaboration of a handbook devoted to interventions in open public spaces of the historical settlements. More in detail, representatives of municipality and main stakeholders on the landscape subject will meet in order to identify strengths, weaknesses, opportunities and threats of the city. Moreover landscape sequence databank will be created: pictures from the same viewpoint and of different periods could provide effective evidence of landscape modification.
