## WORKSHOP

ENERGY

GEO-STRUCTURES SYSTEMS:  
potential resource and issues

**Interreg**  
Alpine Space

 **Greta**  
EUROPEAN REGIONAL DEVELOPMENT FUND

Free of charge - Coffee breaks and lunch will be provided

## ENERGY GEO-STRUCTURES SYSTEMS: potential resource and issues

The role of the energy geo-structures is twofold:

- the primary role is the structural support,
- the secondary role is to combine geothermal heat exchange as a potential renewable energy source of heating and cooling.

**Which is the potential? Which efficiency do they reach?**

**Which are the costs? Which issues may be encountered?**

The workshop aims to deepen the knowledge of using geo-structures for the production of thermal energy.

8 international speakers will talk about existing and undergoing project.

**Register online now!**
